

Developing a Winning Data Strategy with TESCHGlobal and AWS

About AWS Partner offering

Managing enterprise technology is time-consuming, requires deep technical knowledge, and depends on specialized staff who are not always available to organizations. TESCHGlobal's US-based team offers managed services to give organizations a comprehensive and operational managed IT service. We call it Flare Support.

TG's Flare Support provides:

- Access to Online Support Portal for ticket management
- Dedicated Customer Support Personnel
- Defined Protocols for Response Time, Update Frequency, and Support Mode for all support levels (Mission Critical, Urgent, High, Medium, Low)
- Clear and Concise Support Guidelines

Benefits

- ✓ **Standard Support is available as needed through an online ticketing portal.**

Tickets are addressed during standard business hours. Weekday proactive monitoring services for; critical applications, infrastructure support in any cloud, and network management.

- ✓ **Critical Support adds peace of mind with 24/7 phone support.**

When mission-critical issues occur, our team will be reachable in a faster, more convenient way for you.

- ✓ **Drive innovation with integrated data**

Create an end-to-end data strategy that drives innovation with a comprehensive suite of data services that cater to multiple uses cases and workloads.

Create a future-proof data strategy with AWS

Putting data at the center of your organization requires tools that make it simpler to integrate, connect, and manage vast amounts of data sets. To help you make the most of your data—no matter the scale and variety—Amazon Web Services (AWS) provides a comprehensive set of services that are essential to gaining a complete picture of your business and customers. Quickly and securely find, access, and share data when you need it, support robust data governance, and generate predictive insights with artificial intelligence and machine learning (AI/ML). AWS helps organizations around the world build a dynamic, future-proof data strategy that accelerates innovation.

Maximize the business value of data

More than 1.5 million customers choose AWS to solve the most complex data problems in the world. AWS helps organizations harness the value of data with a comprehensive set of services across the data journey from storing, querying, and analyzing data to putting that data into action through business intelligence, machine learning (ML), and generative artificial intelligence (generative AI). AWS also helps organizations integrate data across sources and tools for cataloging and governing data. From gaining a complete view of your customers and optimizing the supply chain to making data-driven decisions and building modern applications, AWS continuously innovates so that you always have the data tools you need with the right price performance for your use case. These tools and services help organizations reimagine processes to improve customer experience, optimize operations, reduce operational risks, and discover new products. Use this data to create ML predictions and business insights in near real-time to help improve the quality of decisions. AWS makes the complexities of data management easier, so you spend less time managing data and the underlying infrastructure, and more time getting value from it.

AWS Partner Promotion

Through our partnership with AWS, we are able to deliver value to our customers that is attentive, responsive, thorough, and timely. Our service offerings include; security and compliance, cloud migration, governance, backup and restore, storage, and network and content delivery. Committed to excellence, TESCHGlobal strives to provide a better understanding to our customers so they can feel confidence in their data configurations and beyond.

Reinvent your business with data

Make better, faster decisions, create new experiences, and optimize your business with the power of data and machine learning on AWS.
